25X1

The Pai-cheng Test Range, located 11 nm NW of Pai-cheng, China, consists of 3 flat-trajectory ballistics ranges, a tank/assault gun firing range, an AAA area, [REDACTED], 2 secured storage areas, and a large support complex. 25X1

No significant changes are visible in the flat-trajectory ranges or the tank/assault gun range, except that a rail spur has been built to the ranges. In the AAA area 2 experimental 8-position emplacements have been built, one possibly complete and one under construction. Each of the 8 positions in the facility under construction is below grade and consists of at least 5 elements. A fenced area containing 2 institutional-type buildings which appear to be for R & D purposes is on the south side of the AAA area.

25X1

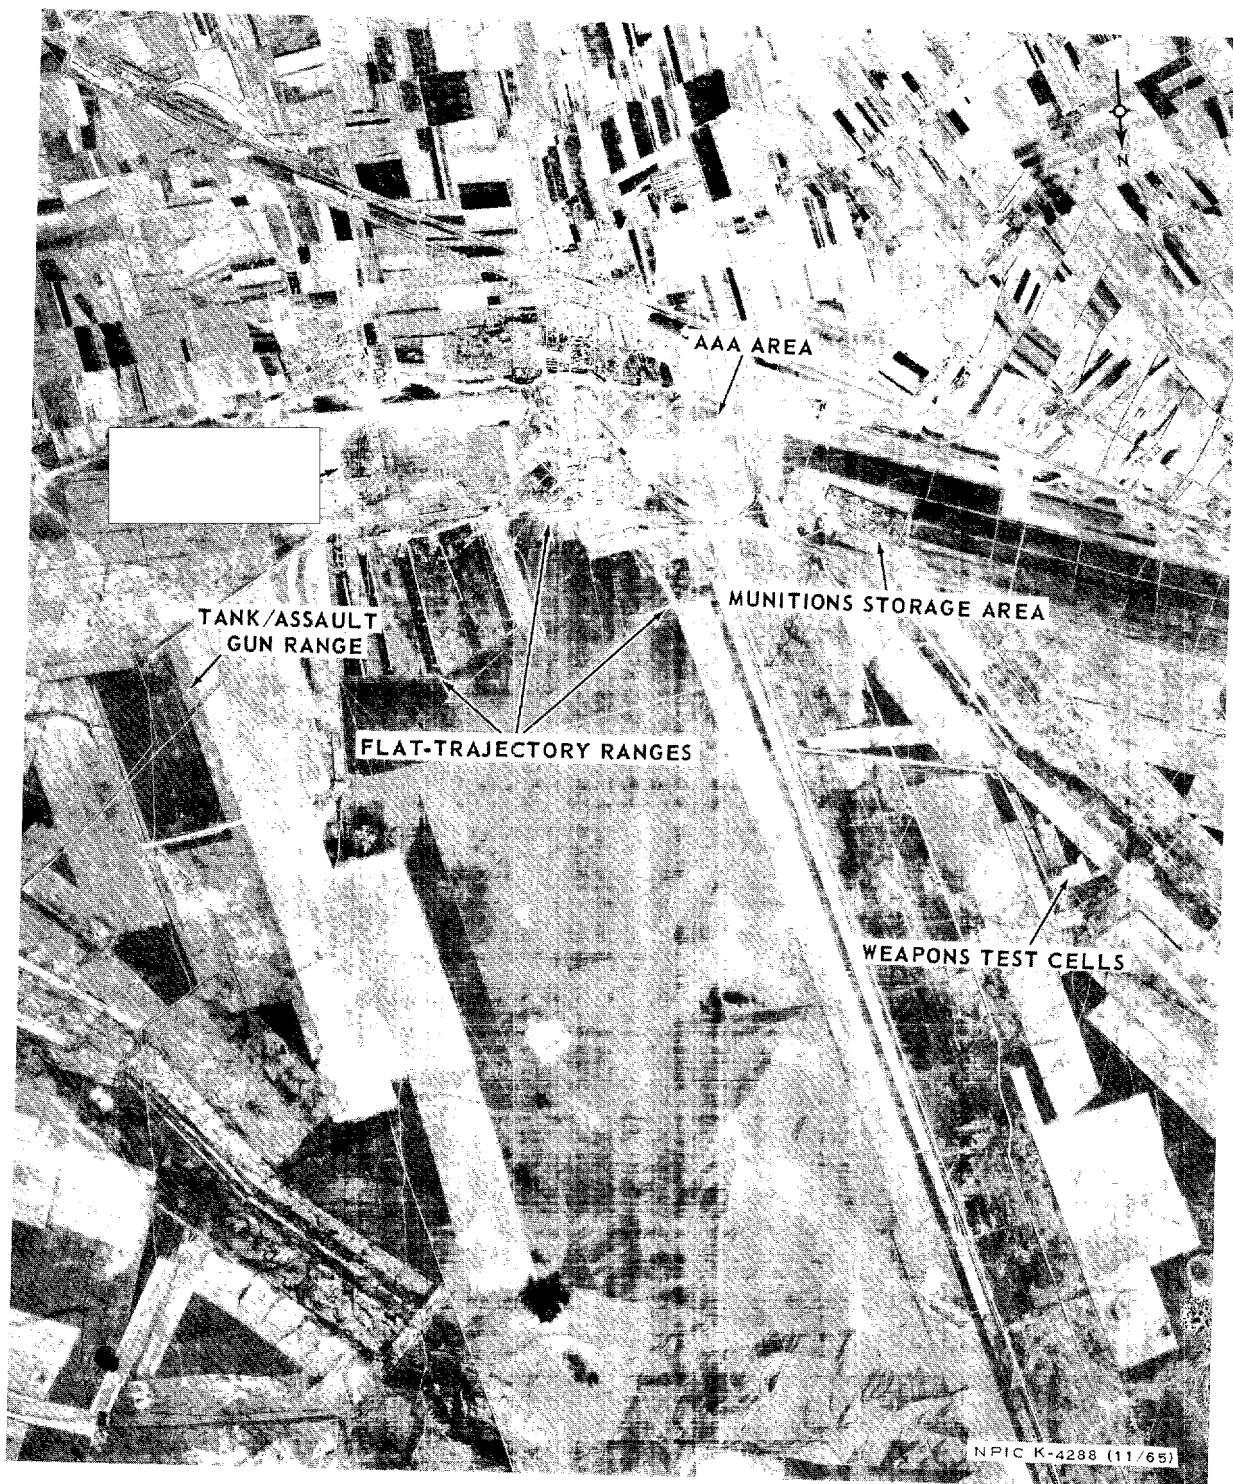

The munitions storage area on the southwest side of the test range is secured by a fence and a ditch and has 12 revetted storage buildings. In addition, a separately secured, ventilated storage building which resembles known CW storage buildings is near the entrance.

Three weapons test cells are still visible. These are used to test fragmentation weapons, but they have been closely associated with [REDACTED] in the USSR at Shikhany and Chapayevsk. 25X1
